

YOUR DECISION:

FAT DISSOLVING DESO

I understand that only in small areas will one session of Deso be effective and it's likely that a course will be required. This has been discussed with me and a plan made. Treatments are usually 4-6 weeks apart.

Swelling and pain is to be expected. The area is often warm and some numbness is common

We advise drinking plenty of water and avoiding excess alcohol

Remember also that you may look worse before you look better.

Allergic reactions are rare- 1:20000

Though extremely rare (less than 0.01%, the agent used to dissolve fat, has the potential to damage (potentially permanent) structures that travel through or surround the fat layer. This principally relates to nerves (sensory or motor), and the overlying skin. This could result in altered sensation, muscle movement or injury to the skin (i.e necrosis), which would result in a scar. More commonly but still rare (less than 0.1%), is the potential for significant inflammatory reactions, leading to small areas of granuloma. Nodules may persist beyond 6 weeks.

Infections and bleeding (leading to hematomas) that require treatment are again extremely rare (less than 0.01%). Changes to skin pigment or asymmetry with regard to the pattern of fat removal may occur.

In addition. I understand the potential of these adverse side effects:

A degree of sweating, nausea, diarrhea may be experienced on rare occasions. Contact us if you are concerned. Other possible side effects include bleeding between periods (if this happens please let us know), allergic reactions (very uncommon) such as nettle rash, asthma, hyperpigmentation (may last up to several months)

I have read this informed consent and certify that I understand its contents in full.

I understand that I must not apply any kind of cosmetics on to the treated area for 12 hours following treatment.

I understand that I must avoid immediate exposure to heat sources during the days following treatments (eg sunlight, UV radiation, sauna)

I am aware that after Deso I should not have treatments using laser, kryolipolysis or radio-frequency.

I know that for 7 days following treatments I should be cautious with exercise.

I understand the nature and purpose of treatment with Deso and possible alternatives to it including having no treatment. I have had adequate time to consider the procedure and have my questions regarding it answered to my satisfaction. I feel sufficiently advised to consent to this procedure.

I understand that it is not advisable to have aesthetic treatments for a week either side of a COVID-19 vaccination.

I understand that results are not guaranteed.
